# ENERGY USAGE GUIDE

[www.CORE.coop](http://www.CORE.coop)

Consult the table below for common household appliances and devices, amount of power required to operate each (wattage), typical number of hours used per month, power required (kW), typical kilowatt-hours (kWh) used per month and monthly cost to operate based on CORE's current residential rate. To calculate the approximate monthly cost to power any other device, use this formula:

$$\text{Cost} = \frac{\text{Wattage} \times \text{Hours Used}}{1,000} \times \text{Rate}$$

**Note:** Volts × Amperage = Wattage; 1 horse power motor = 746 watts
